GOLF · UPDATED NOVEMBER 2026

Slice driver guide

Still losing drives to the right? We compared the most draw-biased drivers of 2026, from Ping and Cobra to Callaway, so you can find more fairways.

The 10 at a glance

#	Driver	Best for	Lofts	Draw tech	Best for
1	Ping G440 SFT	Best overall	9°, 10.5°	23g back weight, Draw or Draw+	Moderate to big slice
2	Cobra OPTM Max-D	Strongest draw bias	10.5°, 12°	11g fixed heel weight	Big slice
3	Callaway Quantum Max-D	Best ball speed	9°, 10.5°, 12°	Internal heel weighting	Moderate to big slice
4	Wilson Dynapwr Max	Best value	10.5°, 12°	Built-in draw bias, 19g rear weight	Moderate slice
5	TaylorMade Qi4D Max	Most forgiving	9°, 10.5°, 12°	Hosel settings only	Mild slice
6	Ping G440 HL SFT	Best for slower swingers	Check retailer	Draw back weight, lighter build	Slower swing that slices
7	Tour Edge Exotics Max	Best sliding weight	9°, 10.5°, 12°	18g sliding weight	Mild to moderate slice
8	Callaway Quantum Max	Best for a mild fade	9°, 10.5°, 12°	Movable weight, neutral or draw	Mild fade
9	Srixon ZXi Max	Best for off-centre hits	9°, 10.5°, 12°	Slight built-in draw bias	Mild slice
10	Cobra DS-Adapt Max-D	Best previous-season buy	Check retailer	Heel weighting, adjustable weights	Big slice

Do draw-bias drivers really fix a slice?

They can reduce it a lot, but they don't fix the swing fault behind it. They help the face close at impact, so a big slice can become a playable fade.

How to choose a driver for a slice

How much draw help do you need?

A rough guide. A lesson is still the best long-term fix.

Mild fade	Regular slice	Big slice	Slow swing + slice
Ball curves a little right	Most drives finish right	Ball starts and curves right	Low, weak slice
Movable weight	**Draw-bias model**	**Strongest D model**	**Light draw model**

1 Work out how big your slice is

A slight fade only needs a little help, like a movable weight set to draw. A slice that finishes in the trees on most holes needs a dedicated draw model, such as the Cobra OPTM Max-D or Ping G440 SFT.

2 Understand how draw drivers work

Draw drivers move weight towards the heel and often use a more upright lie. This helps the clubface close through impact, so the ball starts straighter and curves less to the right.

3 Use the settings before you buy

Many drivers let you change the face angle, lie and weight position. Try the draw settings on your current driver first. You may find a little extra help without buying anything.

4 Add loft if your slice is low

More loft adds backspin and less sidespin, so a 10.5° or 12° head often slices less than a 9° head. If your drives are low and curve right, try more loft.

5 Check the shaft

A shaft that's too stiff or too heavy can make it harder to square the face. A lighter, softer shaft can help some slicers close the face and add height.

6 Pair it with a lesson

A draw driver treats the symptom, not the cause. A lesson on grip, alignment and swing path will help every club in your bag, not just the driver.

Your checklist

Tick things off as you go.

BEFORE THE RANGE

- [ ] Note where your drives usually finish
- [ ] Is it a mild fade or a big slice?
- [ ] Check your current driver's draw settings
- [ ] Shortlist two or three draw drivers

AT THE RANGE OR FITTING

- [ ] Pick one target and stick to it
- [ ] Hit 5 balls with each setting
- [ ] Note start line and curve, not just distance
- [ ] Try 10.5° and 12° lofts

CHECK THE SHAFT

- [ ] Is the shaft too stiff for your speed?
- [ ] Try a lighter shaft option
- [ ] Ask about no-upcharge shafts

AFTER YOU BUY

- [ ] Book a lesson on grip and path
- [ ] Move weights to neutral as you improve
- [ ] Recheck settings every few months

Open the list

Range shot-pattern card

Hit 5 balls at the same target with each driver or setting. Mark where each ball starts and how it curves, then count the drives that would finish in a 30-yard fairway.

Target: _____ Wind: _____ Date: _____

SHOT PATTERNS

Driver and setting	Start line (L / C / R)	Curve (draw / straight / fade / slice)	Avg carry (yd)	Fairways /5
